AERO 343: VIRTUAL REALITY T-6 FLIGHT SIM INSTRUCTION I

This course is designed to introduce U.S. Air Force or Navy students to the Undergraduate Pilot Training (UPT) environment flying the T-6A/B Texan. The course is flight-centric, and thus, will not focus on ground operations or the tactile mechanic of setting up the cockpit and flight instruments. Rather, it will focus on flight maneuvers as described in the AETCMAN 11-248 T-6 Primary Flying such as the takeoff, landing, closed pattern, overhead pattern, radio calls and aerobatics. Students that complete this course will be more prepared to attend UPT because they will possess greater knowledge of the flight characteristics and parameters of the T-6. Cadets are encouraged to take AS 344 the immediate next semester.
