

PSYC 220: RESEARCH METHODS (Q)

This is a lecture/laboratory course that focuses on why and how empirical research is conducted in psychology. Students learn how to critically evaluate published psychological research, design and conduct research studies, analyze data, and interpret computer-generated statistics. We will investigate variables, methods, and problems pertaining to psychological research. In lab, students participate in data collection, design and conduct research studies, use computer software to analyze data, and interpret the results. Offered every semester.

Credits: 4

Prerequisites:

minimum grade of C- in PSYC 101 or 111.

Department: [Psychology](#)
